

### The Snap-N-Lock™ Insulated Panel

is comprised of metal skins that are rolled to form a unique, patented locking system that easily snaps together, and an energy-efficient continuous polystyrene foam core interface. The internal locking system eliminates the need for additional fastening methods at the joint. Sealant is encased in the joint, protecting it from ultraviolet destruction and forming a waterproof seal.

The panel adapts easily to a variety of floor plans and offers a wide range of design flexibility and usages including outdoor malls, restaurants, in-plant offices, small or large scale freestanding units, canopies, and single or multi-family homes. Available 2" - 8" thick and up to 32' in length.

- Internal Snap-Lock fastening feature
- Snaps together in header
- No rocking of panels required
- Continuous Insulation
- Quick and easy to install
- Foam thicknesses from 2" to 8"
- Panels come in 48" or 23-1/8" widths
- Eliminates condensation problems.
- Skylights and fans installed with ease.

Patent No.'s 4,769,963 and 5,086,599

### Fan Beam

Beam is surrounded on all sides by foam for better lamination and to reduce telegraphing

# More Sizes. More Colors. More Options.

## What is Tuff-Kote Gold?

Tuff-Kote Gold is a dual-layer paint finish with a base color layer, and a clear protective top layer. The top coat is fused to the base coat during the baking cycle. The result is a paint finish that is more resistant to damage than standard paint finishes.

- Durable satin matte finish.
- More resistant to weather and alkalines.
- Requires less maintenance than other finishes.
- Resists scratching, marring, corrosion and fading.
- Protects against surface damage during installation process.

Use of White Tuff-Kote Gold Dual Layer Paint Finish on the top / outside of any Snap-N-Lock™ Insulated Panel

can make the panel eligible for a \$1500 Tax Credit. Learn more from a Structall representative or go to [www.energystar.gov](http://www.energystar.gov).
